DETAILED ACTION

1. This Office Action is in response to the Arguments/Amendments filed January 14th, 2008.

Allowable Subject Matter

2. Claims 1 – 12 are allowed.
3. With respect to independent claim 1, the allowability resides in the overall structure of the power supply as recited and at least in part because of the first series circuit, a second series circuit, smoothing circuit and control circuit as claimed, and the transformer with a main core made of magnetic material in which the secondary winding is lap-wound on the primary winding with a given gap; and a plurality of auxiliary cores made of magnetic material disposed in the given gap with a given distance in a circumferential direction of the primary winding wherein the reactor is formed of a leakage inductance with an inductance value set by adjusting the number and/or length of the auxiliary cores, and wherein the plurality of auxiliary cores are provided on the transformer to leak a part of a magnetic flux generated by the main core.

The aforementioned limitations in combination with all remaining limitations of claim 1 are believed to render said claim and all claims dependent therefrom patentable over the art of record.

4. With respect to independent claim 3, the allowability resides in the overall structure of the power supply as recited and at least in part because of the subject matter identical to that of claim 1, and the transformer has: a cylindrical inner bobbin and outer bobbin as claimed, and wherein the inner bobbin is mounted to the main core

Art Unit: 2838

under a condition where the inner bobbin is inserted to the outer bobbin thereby the secondary winding is lap-wound on the primary winding via the insulating magnetic material.

The aforementioned limitations in combination with all remaining limitations of claim 3 are believed to render said claim and all claims dependent therefrom patentable over the art of record.

5. With respect to independent claim 4, the allowability resides in the overall structure of the power supply as recited and at least in part because of the subject matter identical to that of claim 1, and a feedback winding as claimed and the transformer having: a mirror E-shape main core with; a central leg, first side core, second side core and plurality of auxiliary cores as claimed.

The aforementioned limitations in combination with all remaining limitations of claim 4 are believed to render said claim and all claims dependent therefrom patentable over the art of record.

6. With respect to independent claim 6, the allowability resides in the overall structure of the power supply as recited and at least in part because of the combination of subject matter identical to that of independent claims 1, 3 and 4.

The aforementioned limitations in combination with all remaining limitations of claim 6 are believed to render said claim and all claims dependent therefrom patentable over the art of record.

Response to Arguments

7. Applicant's arguments and amendments, filed January 14th, 2008, with respect to claims 1 – 12 have been fully considered and are persuasive. Therefore the rejection of all claims has been withdrawn.

Conclusion

8. The prior art made of record and not previously relied upon is considered pertinent to applicant's disclosure.
